

The 16 most important reasons for purchasing a VIDEOSTATION®

– Last updated: February 2013 –

1. **Short cycles of innovation:** We are trying to be always up to date in terms of technological development of hardware. As soon as the suitability of new components for video editing is tested and proven, we adopt the choice of hardware used in the VIDEOSTATION® to the latest technological change*.
*Also read our latest report on solid-state disks at http://www.VIDEOSTATION.info/ssd_en.htm
2. **Manufacture instead of fabric.** For each VIDEOSTATION®, we use about 10 hours in manufacturing for assembly and wiring. The results speak for themselves! The extremely high quality components have a useful life of at least 5 years. Which results in the fact that VIDEOSTATION® can, even after many years be renovated by us through simply change the key components, which significantly extends the life again (Super-Upgrade-Package).
3. The VIDEOSTATION® is the editing suite with **the lowest noise emission*** in the marketplace. A great feature for undisturbed creative work. (* = Super-Silence-Package needed)
4. The VIDEOSTATION® is **compatible** with every established editing program, like e. g. ADOBE Premiere, AVID Media Composer, CANOPUS Edius, MAGIX Video Deluxe, MATROX, and PINNACLE Studio, SONY VEGAS, and many more. It is therefore an **excellent alternative** to the officially certified workstations like HP Z-Series or DELL Precision.
5. The official manual to our editing suite is also available in English http://www.videostation.info/downloads/videostation_user_manual.pdf
6. **Real hardware RAID**, therefore highspeed and fault tolerance for your video and project data. This feature protects you from the risk of costly total losses. It is included in every VIDEOSTATION® as standard. The RAID offers **up to 8 hard disks** which can be parted in groups. So you can establish logical units and part them even for high speed editing and archiving issues. Depending on the number of disks and the chosen configuration VIDEOSTATION® offers a total gross capacity **up to 32 Terabyte**. Our competitors will demand a hefty surcharge for this feature!
7. Every VIDEOSTATION® is equipped **with up to 8 hot swap enclosures for hard disk drives** with individual LED indicator lights for access and failure as standard. Even if you need another disk for backup or transfer: there is no screwdriver necessary!
8. **External extensions** can be realized through various **standard interfaces** like Firewire 400 / 800, eSATAp, and USB 3.0.

9. All VIDEOSTATION® models on offer are also available as **19" versions for the studio rack**.
10. Every VIDEOSTATION® is equipped with a **card reader for up to 57 different formats** in order to upload recordings directly from the camera chip (e. g. SDXC, optionally also PS and SxS).
11. Every VIDEOSTATION® delivery includes a premium software package. See <http://www.videostation.info/softwarepaket.htm>
12. The processing speed of ADOBE Premiere CS5 is being considerably improved by CUDA. See <http://www.videostation.info/CUDA/CUDA.htm>
13. In case of emergency, **support via the internet** will be available. We will conduct the necessary adjustments for you, or demonstrate certain procedures while you are watching.
14. **3 years warranty**. In the first year, this includes free collection and delivery in case of hardware failures.
15. VIDEOSTATION® does exist **for over 15 years** now, and our company already since 1994.
16. Last but not least: Our **free and friendly support is not a call center** but directly the team that designed and implemented VIDEOSTATION®. Accordingly, competent and creative support, you will not find with any other manufacturer these days.
